

**Crop Production :: Cereal :: Rice :: Semi Dry Rice with Canal Irrigation**

**After cultivation**

- Thinning and gap filling has to be done 14 - 21 days after sowing

**Other special cultural practices**

- Spray Cycocel 1000 ppm (1 ml of in one lit. of water) under water deficit situations to mitigate ill-effects.
- Foliar spray of KCl 1% to overcome moisture stress at different physiological stages of rice.
- First top dressing should be done immediately after the receipt of sufficient rain or canal water.
- Hand weeding, thinning and gap filling should be done before N-fertilizer application.
- Subsequent top dressings in two or three splits should be done before heading.
