

## Irrigation

- Irrigation is given to moist the soil during early period of 10 days.
- Restoring irrigation to a maximum depth of 2.5 cm after development of hairline cracks in the soil until panicle initiation stage.
- Increasing irrigation depth upto 5.0 cm after PI and one day after disappearance of ponded water.
- Alternate wetting and drying irrigation (AWDI) reduces the total number of irrigation given to rice crop.

**Field Water Tube (FWT)**

**AWDI**
