

Nutrient Management :: Rice : Main Field

**Application of Organic Manures**

- Apply FYM 12.5 t/ha or compost or green leaf manure @ 6.25 t/ha.
- If green manure is raised @ 50 kg seeds/ha in situ, incorporate it to a depth of 15 cm using a green manure trampler or tractor.
- In the place of green manure, press mud / composted coir pith can also be used.

**Green Manure Incorporation****Stubble Incorporation:**

- Apply 22 kg urea / ha at the time of first puddling while incorporating the stubbles of previous crop to compensate immobilization of N by the stubbles.
- This may be done at least 10 days prior to planting of subsequent crop.
- This recommendation is more suitable for double crop wetlands, wherein, the second crop is transplanted in succession with short turn around period.
